

Limited Visual Dam Safety Inspection Summary Report

MA-095

Haiku Reservoir

Maui, Hawaii

Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

| Dam ID: | MA-0095 | |
|----------|-----------------|--|
| Name: Ha | aiku Reservoir_ | |

|--|

I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

| Dam ID: <u>MA-0095</u> | | |
|------------------------|-----------------|--|
| Name: Ha | aiku Reservoir_ | |

IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

V. Inspection Team

VIII. Dam Type

The dam appeared to be an earthen embankment dam.

| Dam ID: | MA-0095 | |
|----------|----------------|--|
| Name: Ha | aiku Reservoir | |

IX. Dam Classification

The current hazard classification of this dam is: High

Hazard Potential Classification based on the following:

| Category | Loss of Life | Economic Loss |
|-------------|--|---|
| Low | None Expected | Minimal (undeveloped to occasional structures |
| | | or agriculture) |
| Significant | Few (No Urban development and no more than a small number of inhabitable structures) | Appreciable (Notable agriculture, industry or structures) |
| High | More than a few | Extensive community, industry or agriculture. |

Based on inventoried storage and height data, the size classification of the dam is: Most likely Small but insufficient information is available to inspectors to make a determination.

Size Classification based on the following:

| Category | Storage (Acre-Feet) | Height (feet) |
|--------------|---------------------|----------------|
| Small | < 1000 | < 40 |
| Intermediate | > 1000 and < 50,000 | > 40 and < 100 |
| Large | > 50,000 | > 100 |

X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

| Satisfactory | Expected to fulfill intended function. |
|----------------|---|
| Fair | Expected to fulfill intended function, but maintenance is recommended. |
| Poor | May not fulfill intended function; maintenance or repairs are necessary. |
| Unsatisfactory | Is not expected to fulfill intended function; repair, replacement, or modification is necessary. |
| Unknown | Not visible, not accessible, not inspected, or unable to determine the condition rating based on the observation taken. |

| Dam ID: _ | MA-0095 | |
|-----------|-----------------|--|
| Name: Ha | aiku Reservoir_ | |

A. General appearance:

The dam consists of an earthfill embankment. The dam is approximately 38 feet tall and 1700 feet long. The dam is fed by an irrigation ditch. The purpose of the reservoir is irrigation.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An Emergency Action Plan (EAP) is on file with the department, submit any updates as applicable.
- c. Access to site appears to be satisfactory.
- Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- e. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- f. Power / Communication: There were no communication systems observed on this reservoir.

B. Access / Security:

Access to the dam was accomplished via a private roadway.

A four-wheel drive vehicle is required.

Security issues. Access to the dam is unrestricted.

C. Intake Works:

Intake is an irrigation ditch.

Findings and Corrective Actions:

- a. The intake works were not inspected.
- b. The intake works were not tested.
- c. There was no time to inspect the inlet ditch.

D. Reservoir:

The reservoir level was 27.5 feet at the time of inspection.

The normal operating level varies depending on the inflow from the irrigation ditch. The irrigation ditch fills the reservoir.

The staff gage consists of posts on the upstream slope at the time of inspection.

Findings and Corrective Actions:

a. The reservoir was not inspected.

| Dam ID: <u>MA-0095</u> | | |
|------------------------|-----------------|--|
| Name: Ha | aiku Reservoir_ | |

E. Upstream Slope: (Satisfactory)

The upstream slope was 1 on 3.

The upstream slope is protected by fitted rip rap.

The riprap is covered with small amount of low ground cover.

Findings and Corrective Actions:

a. The upstream slope appeared to be in satisfactory condition, no corrective actions are required at this time.

F. Crest: (Satisfactory)

The dam crest was approximately 12 feet wide.

There is a 12' wide unsurfaced road on the crest.

The crest has low ground cover consisting of short grass on the crest.

Findings and Corrective Actions:

a. The dam crest appeared to be in satisfactory condition, no corrective actions are required at this time.

G. Downstream Slope: (Satisfactory)

The downstream slope was approximately 1 on 1.5 slope to 1 on 2 slope.

The downstream slope had low ground cover consisting of short grass that covers the slope.

There was no seepage observed at the time of inspection.

Findings and Corrective Actions:

a. The downstream slope appeared to be in satisfactory condition, no corrective actions are required at this time.

H. Abutments / Toe: (Fair)

There is brush at the downstream toe on the right half of the dam. The downstream toe on the left half consists of short grass.

Two PVC pipes at the outlet works were flowing clear water at a rate of approximately 30-gpm each. Pipes provide drainage for a toe drain/blanket located at the downstream toe of the dam. Did not observe seepage emanating from the toe or from areas downstream of the toe.

Findings and Corrective Actions:

- a. The abutments/toe appeared to be in fair to poor condition and requires corrective action.
- b. The abutment/toe area was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection. Remove brush along toe on the right half of the dam.
- c. Routinely monitor and measure flow from the PVC drain blanket pipes at the outlet works.

| Dam ID: | MA-0095 | |
|----------|-----------------|--|
| Name: Ha | aiku Reservoir_ | |

I. Outlet Works: (Satisfactory)

The outlet consists of an 18" diameter steel pipe.

The control of the outlet is with a valve that is on the downstream side.

Findings and Corrective Actions:

- a. The outlet works were not inspected.
- b. The outlet works appeared to be in satisfactory condition, no corrective actions are required at this time.

J. Spillway: (Satisfactory)

This spillway is consisted of a channel and concrete sill. The spillway is located on the backside of the reservoir.

The spillway approach was clear.

Erosion was not observed at the time of inspection.

Findings and Corrective Actions:

a. The Spillway appeared to be in satisfactory condition, no corrective actions are required at this time.

K. Down Stream Channel: (Unknown)

Findings and Corrective Actions:

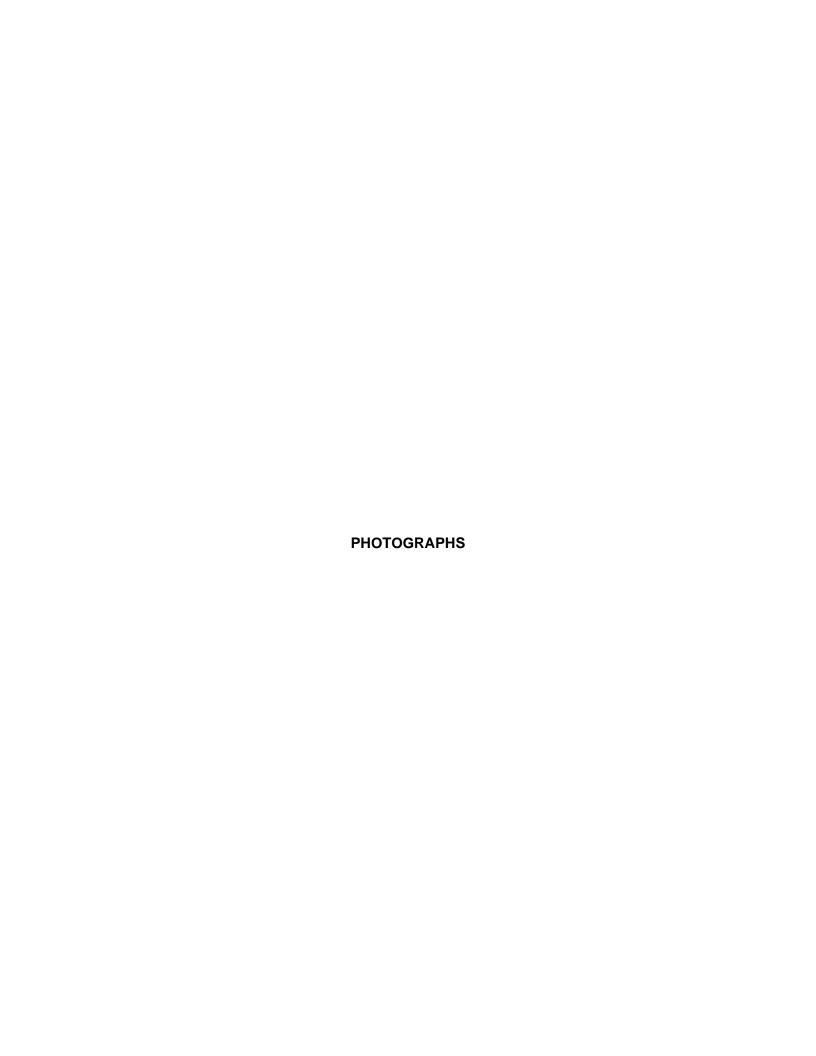

a. The downstream channel was not inspected.

XI. Additional Comments:

There is no immediate threat to the safety of the dam.

Recommendation:

- Vegetation conditions on the embankment are excellent. Short grass covered the upstream slope, crest, and downstream slope of the dam. The dam owner should continue with the current vegetation management practice.
- 2) Remove brush growing along the downstream toe of the right half of the dam.
- 3) Routinely measure and monitor the flow out of the PVC toe drain outfall pipes located at the outlet works. Compare flowrates to reservoir pool elevations.

095 Crest and downstream slope. Vegetation management is excellent. Short grass covers the crest and slope.

095 Cutter attachment on an excavator. The cutter attachment is used to cut brush.

095 Downstream slope near the outlet works. Vegetation on the slope is excellent. The grass is short and does not hinder inspection. (panorama) 1

095 Downstream slope near the outlet works. Vegetation on the slope is excellent. The grass is short and does not hinder inspection. (panorama)

095 PVC outfall pipe for the toe drain. Pipe is located at the outlet works. Flowrate is approximately 15 gpm.

095 PVC outfall pipe for the toe drain (located behind the gate valve). Flowrate is approximately 15 gpm.

095 spillway - The upstream slope of the dam is in the left background.

095 Brush along the downstream toe on the right half of the dam. The brush should be removed.

095 Downstream toe of the dam. Vegetation management is good. Grass covering the slope and toe area is short. The tree at the toe should be removed.

095 Upstream slope. Vegetation management is excellent. Short grass covers the slope.

| | □ j | Tree(s) were obtailures, and ca Corrective action of the tree and it | oserved on the dam embankment. Trees have been identified as the probably cause of piping in possibly cause sever damage to the embankment if they are uprooted during a high winds. On is required to remove the tree hazards from the dam. Acceptable remedies include removal its root structure down to a 2" diameter and reconstructing the damaged embankment section. Shall be accomplished as per the requirements of licensed geotechnical or structural engineer. |

Routinely monitor the damaged area for signs of settlement and seepage.

Additional Comments:

On the date of this limited visual inspection, there appeared to be no immediate threat to the safety of the dam. No assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

| FINDINGS: |
|---|
| Conclusion: There is no immediate threat to the safety of |
| the dam |
| Recommendations: |
| 1) The vegetation conditions on the embankment are |
| excellent. Short gross covered the upstran stope, crest, |
| and downstream slope of the dam. The dam owner |
| should continue with the current wegetation management |
| Aractica. |
| 2) Remove bouch growing along the Lounstream toe of the |
| right half of the dam. |
| 3) Routinely measure and monita flow out of the PVC toe drain |
| outfall pipes located at the outlet works. Compare |
| flourates to reservoir poul elevations. |
| |

Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
